

AUTONOMOUS SECURITY OPERATIONS.

Built for the Modern Threat Landscape.

Submarinx XDR is an AI-native cyber defense platform that combines intelligent threat detection, autonomous decision-making, and active response into a single security operations experience.

Powered by high-fidelity endpoint telemetry, an Autonomous AI SOC Analyst, and zero-trust communications, Submarinx helps organizations detect threats earlier, contain incidents faster, and reduce operational burden on security teams.

Detect Earlier.

Contain Faster.

Reduce MTTR.

INTRODUCTION

Traditional security tools generate alerts.

Submarinx generates decisions.

Most security teams are overwhelmed by alert volume, fragmented tooling, and limited response capacity. As attacks become faster and more sophisticated, organizations need more than visibility—they need action.

Submarinx XDR unifies endpoint telemetry, AI-assisted threat analysis, and autonomous response workflows into a single operational platform designed to detect earlier, decide faster, and contain threats consistently.

CORE ARCHITECTURE

HOW SUBMARINX WORKS

Designed to Detect.

Built to Respond.

MODULE 1

AUTONOMOUS EDGE SENSORS

Submarinx continuously monitors endpoint activity through lightweight, memory-safe sensors engineered for performance, resilience, and deep operational visibility.

Behavioral indicators, system activity, and security-relevant events are transformed into actionable telemetry, enabling rapid threat detection and continuous visibility across the environment.

MODULE 2

AUTONOMOUS AI SOC ANALYST

At the center of the platform is an AI-powered security analyst operating directly within the detection pipeline.

Every heuristic alert, behavioral anomaly, and system metric is continuously evaluated, correlated, and prioritized to produce actionable security decisions in real time.

Instead of overwhelming analysts with alerts, Submarinx delivers clear outcomes.

Monitor.

Quarantine.

Tarpit.

From signal to decision without analyst bottlenecks.

MODULE 3

ZERO-TRUST mTLS VAULT

Every endpoint is assigned a unique cryptographic identity.

Telemetry, response actions, and operational communications are secured through mutual authentication and encrypted channels, ensuring that trust is continuously verified and never assumed.

Protecting both visibility and control.

MODULE 4

ACTIVE DEFENSE ENGINE

Detection alone is no longer enough.

Submarinx extends beyond passive monitoring by enabling automated containment, endpoint isolation, and deception-driven response mechanisms designed to disrupt attacker activity before it escalates.

Rather than simply observing intrusions, the platform actively slows, contains, and neutralizes threats while preserving valuable intelligence for investigation.

THREAT MATRIX

THE THREAT MATRIX

See how autonomous response changes the outcome.

Modern attacks move in minutes.

Security teams often respond in hours.

Submarinx helps close that gap by continuously evaluating attacker behavior and executing response actions when every second matters.

COMMAND CENTER

REAL-TIME COMMAND CENTER

One Platform.

Complete Visibility.

Monitor security posture, endpoint health, active incidents, and autonomous response activity through a unified operational interface built for modern Security Operations Centers.

Watch telemetry flow.

Observe AI decisions.

Track containment actions.

All in real time.

No refreshes.

No delays.

No blind spots.

LIVE RADAR

LIVE THREAT VISIBILITY

Track endpoints, security events, active threats, and containment activities across your environment through continuously updated operational intelligence.

AI STREAM

AI DECISION STREAM

Observe how the Autonomous AI SOC Analyst evaluates threats, prioritizes risk, and drives response actions as attacks unfold.

SECURITY VAULT

ZERO-TRUST COMMUNICATIONS

Protect telemetry, response workflows, and operational data through certificate-based identity, encrypted communications, and continuous trust validation.

WHO WE HELP

BUILT FOR HIGH-CONSEQUENCE ENVIRONMENTS

Submarinx is designed for organizations where cyber incidents create significant operational, financial, or strategic impact.

DEFENSE & AEROSPACE

Protect sensitive intellectual property, research programs, mission-critical systems, and sovereign infrastructure from advanced adversaries.

FINANCIAL SERVICES & FINTECH

Reduce exposure to credential attacks, fraud operations, account compromise, and financial data theft targeting critical business systems.

CRITICAL INFRASTRUCTURE

Defend industrial environments, operational technology, and essential services where resilience, uptime, and operational continuity are mission critical.

TRUST SECTION

YOUR DATA. YOUR ENVIRONMENT. YOUR CONTROL.

Submarinx is built around a simple principle:

Organizations should maintain control over their security data.

Telemetry, analysis workflows, and operational intelligence remain under your control, supporting data sovereignty, regulatory compliance, and secure deployment requirements.

FINAL CTA

THE FUTURE OF SECURITY OPERATIONS IS AUTONOMOUS.

Submarinx helps organizations detect earlier, decide faster, and respond with confidence.

Join our early-access program and help shape the next generation of cyber defense.
